SUMMARY

ICONIC BRAND

Zag, located in Chamonix, has become a brand of reference in the all mountain, freeride and touring ski industries. A bold and enthusiastic team remains on the cutting edge of research with the goal of designing increasingly intuitive and high- performing skis.

Today, this high-end brand holds close its values of passion and authenticity, continuing to anticipate the evolving demands of the ski market. Certain skis have become emblematic- like the UBAC for tourers or SLAP for free-tourers without limit. Known for its technical precision and its strong visual identity, ZAG remains the brand of choice for mountain lovers looking for unique slide sensations.

"Back in 2002, ZAG launched the BIG and pioneered off-piste skiing, with an innovative versatile and playful progressive tip.

20 years later, ZAG is modernizing on-piste skiing with the MATA with its unconventional shape !

MATA comes from Savoie dialect. It means COMPACT SNOW.

Thanks to its original shape, MATA will generate unique thrills carving on compact snow!

We continue to develop our skis in our LAB in Chamonix with the single objective "to bring happiness and sharing joy to all gliding enthusiasts through skiing".

With the MATA, we are guaranteeing great days of fun skiing with your friends or family. Come and try the MATA at all our partner retailers around the world and at our concept store in Chamonix.

You are always welcome in our office in Chamonix all winter long to have a chat with us and discover our LAB.

Enjoy your winter and be Happy Together"

Caroline de Wailly, CEO

INNOVATIVE DESIGN

Saint-Lazare, formely Be-Poles, was born at the beginning of the 2000's and developed in Paris and New York with the aim of: building strong and long-lasting brands, based on strong basis and not on passing fads. We often introduce ourselves as a designs studio rather than as an agency. Creation, guided by our intuition, is at the core of our approach.

We always wanted to think about the brand not as a logo but as stories to live and memories to create. Our job consists of understanding and telling a brand's story with sensitivity, intelligence and experience to allow it to be understood. To conclude, our narrative approach will serve their brand's speech.

Meeting ZAG was the perfect opportunity to combine this approach with the brands and our enthusiasm for mountains. Antoine Ricardou, co-founder of the Studio with Clémentine Larroumet has fasteners is La Clusaz in the Aravis (Alps). Every winter he roams the mountaintops and alpine tracks on his UBAC. This confrontation with ZAG's reality reinforces each year his graphic proposal for the lines he's constantly renewing.

ADVANCED TECHNOLOGY

Our two engineers Bastien Saillard and Paul Chevalot design our skis in the ZAG Lab located in Chamonix with the goal of satisfying the many tastes of our customers. Always hungry to improve, they spend their time studying innovative shapes, materials, and constructions.

"We are compelled to endlessly innovate by creating skis that are increasingly intuitive, comfortable, high performing, and that provide skiers with a unique riding experience.

With our concept store at the foot of Grands Montets, our playground is in our backyard. Being so connected with the environment is a true source of inspiration.

This is what allows us to create such comfortable and whigh-performing skis."

Bastien Saillard, Director of Research and Development

The ZAG LAB allows our engineers to create prototypes in record time, and its prime location in Chamonix lets us test them right away and make improvements accordingly. The team was able to test the skis on all types of snow.

This year, they developped the MATA, a new all-mountain ski that allows unique carving sensations.

This connection to nature pushes ZAG's R&D team to create products that are respectful to the environment, especially through the use of new materials or designs. The ZAGREEN Program represents ZAG's commitment to sustainability.

Aware that our playground is threatened and that the quality of the air in the valley is more and more an issue of discussion, ZAG has launched the ZAGreen Program. Created in 2017, the aim of this program is to reduce the environmental impact of the ski industry. The actions that will be done will concern the manufacturing of the products, the way we practice skiing and also the daily life in our office. In addition to the measures involving only the company, the aim is to increase awareness among the whole community about the environmental challenge that is the air quality in our valley. ZAGreen is a project that hopes to be heard and also to involve more actors of this beautiful place.

All of our materials and products are developed in collaboration with our suppliers to reduce the impact while keeping the performance, quality and durability of our skis unchanged.

For example, our thermoplastics are made from recycled materials and produced in a responsible way (REACH, reductions of waste,...).

The enrolment of the ski-touring line in the project 1% for the planet also helps ZAG reaching its goal: preserving its playground. In 2021, ZAG redistributed this percentage to Mountain Wilderness. In 2023, we are giving the 1% to Mountain Riders and the cleaning project «Adopt ton spot», in Chamonix (La Flégère).

BIO SOURCED RESIN

We have used a resin which is 33% bio-sourced to produce the ADRET range since 2016. 25 % for the other range. It is mainly composed of oil produced with oil plants.

MATERIALS FROM EUROPE

Constant research to find the most performing and eco-responsible materials.

RECYCLED EDGES

Thick edges on alpine skis on thin edges on ultra-light skis.
The edges are from recycled metal.

RECYCLED BASE

Up to 85% of recycled materials on black base only.

WOODEN CORE

Quality gain. Ensures the durability. Respects the forests sustainable management.

TOPSHEET

Our topsheet are made of 50% bio-sourced materials.

COTTON BAGS

We switched to bio cotton bags packaging in 2020 to stop producing around 1600kg of plastic each year.

T#GETHER

Inspired by 70s surf culture, we're shaking up the traditional vision of ski touring with an unconventional approach.
A perfect invitation to explore the outdoors between friends, where fun comes first!

NEW SENSATIONS IN THE RESORT

HEAVY DUTY TO CONSTRUCTION

Inserting titanal on our normal heavy duty construction was thought to enhance grip and enhance energy return. This construction is perfect for skis in a carving range that need to be precise. The quadriaxial fiberglass and rubber inserts creates a ski that's comfortable in all types of conditions.

- 1 Polyamide topsheet: 50% bio-sourced, durability et shiny colors.
- 2 Quadri-axial fiber : Power and stability.
- 3 Semi-Cap construction : ABS sidewalls for energy transmission.
- 4 Titanal inserts : Efficient edge to edge transision and grip.
- 5 Full poplar wood core: Lightness and resistance.
- 6 High resitance edges : Durability.
- 7 Sintered bases : Slide, durability.
- 8 Rubber: Vibration dampening.

Wan,

COLLECTION 24,25

∞

The all-mountain ski that you've never seen before!

This marks the arrival of a new ski and a new state of mind within the ZAG family. This ski was designed with an explosive asymmetric shape and impressive skiability. 90mm under foot to give it versatility coupled with a titanal plate to let you control the power when you want it. Agressive but not exclusive, carving has never been as enjoyable than with the new MATA Ti.

ULTRA LIGHT CONSTRUCTION

The combination of lightness and performance while being rigid in torsion and in flex, makes the ADRET exemplary in reliability. These are perfect characteristics for an ultra light touring ski! High resistance carbon fiber gives this ski the lightness and stiffness expected by the most demanding of ski tourers and is virtually unbreakable! The rubber fiber absorbs vibrations adding to it's impeccable feeling on snow.

- 1 Polyamide topsheet: 50% bio-sourced, durability and shiny colors.
- 2 High resistance carbon (62%) & glass fiber: Maximal resistance and lightness.
- 3 Cap construction: No ABS sidewalls for lightness.
- 4 Paulownia wood core: Lightness.
- 5 High resitance thin edges: Lightness.
- 6 Sintered bases : Slide, durability.
- 7 Phenol plate: Anti-pullout system for ultra light bindings.
- 8 Rubber : Vibration dampening.

23

≉

ADRET 78

If you need to get home for lunch!

An ultra-light ski that has excellent skiability for it's category. Torsionally stiff increases edge hold to give you that secure feeling in icy conditions on the downs or the ups. Dedicated for those who are looking for a ski imagined and developed for the steeps, ski mountaineering or ski touring excursions over multiple days. The ADRET 78 also suits those looking to add a mountaineering ski for training to their quiver.

24.25 LIGHT TOURING

LIGHT CONSTRUCTION

Built with the best ratio between lightness and skiability to give ski tourers the closest feeling to a freeride ski possible. The wood core saves a few extra grams without impacting the feeling underfoot or the resistance of the material. Thick edges and ABS sidewalls make the UBAC range durable and impact resistant.

- 1 Polyamide topsheet: 50% bio-sourced, durability et shiny colors.
- 2 High resistance carbon (30%) & glass fiber : Skiability and lightness.
- 3 Semi-Cap construction: ABS sidewalls for energy transmission.
- 4 Paulownia wood core: Lightness.
- 5 High resitance edges : Durability.
- 6 Sintered bases : Slide, durability.
- 7 Phenol plate: Anti-pullout system for light bindings.
- 8 Rubber : Vibration dampening.

HEAVY DUTY CONSTRUCTION

The best compromise between flex and torsion. Composed of double layer multiaxial fiberglass, the objective is to make this ski effective in all types of snow. Based on the legendary H-112, having proven themselves on the feet of our best riders, the heavy duty construction gives skiers maximum safety and reliability. Lightweight for more float but rigid to enjoy the most out of tracked out snow, this construction gives you grip in the toughest of conditions!

- 1 Polyamide topsheet: 50% bio-sourced, durability shiny colors.
- 2 Quadri-axial fiber: Stability and resistance.
- 3 Semi-Cap construction : ABS sidewalls for energy transmission.
- 4 Full poplar wood core : Lightness and resistance.
- 5 High resitance edges : Durability.
- 6 Sintered bases : Slide, durability.

HEAVY DUTY LIGHT CONSTRUCTION

Lightness and power to hit the groomers and open fields of fresh pow. This construction uses multiaxial fiberglass, increasing its skiability and power by providing stiffness in torsion and flex. The goal was also to reduce the weight of these XXL skis, hence the combination or paulownia (lightness) and poplar (resistance). In the end, this construction creates a light and playful ski that's stable at high speeds and resistant over time!

- 1 Polyamide topsheet: 50% bio-sourced, durability and shiny colors.
- 2 Quadri-axial fiber: Pop and resistance.
- 3 Semi-Cap construction : ABS sidewalls for energy transmission.
- 4 Flax : Dampening properties.
- 5 Poplar and Paulownia wood core: Lightness and resistance.
- 6 High resitance edges: Durability.
- 7 Sintered bases : Slide, durability.
- 8 Phenol plate: Anti-pullout system for bindings.
- 9 Rubber : Vibration dampening.

SKINS

POMOCA x ZAG

Composition: 70% Mohair, 30% Nylon Designed for experienced ski tourers and amateur competitors, the Climb Pro Glide mixed structure skin is ideal for multi-day expeditions, offering extra performance and gliding qualities.

PERFORMANCE

The polyvalent Climb Pro Glide combines excellent gliding performance, good traction and utmost resistance. Extremely versatile use, ranging from competition to long-term touring.

QUALITY

Best gliding mix skin ever, best anti-glopping skins, very resistant: the skin for professionals.

ZAG ROUND NECK

MEDIUM FIT

Matière principale:

french terry, 100% organic cotton, ring spun combed, garment washed, garment dyed, 300 g/m²

SIZE GUIDE YOU'LL SEE, IT'S VERY EASY TO APPLY!

EXAMPLE:

Your size [a]: 173 cm Your level [b]: Expert Choose your ski range and model: HARFANG 96

Find the box in the table that corresponds to you.

Calculate:

I'm 173 cm and I'm an Expert [-2 ou +8]:
173 + [-2cm] = 171 cm or 173 + [+8cm] = 181 cm
Two sizes could correspond: 170cm and 176cm

These indications are only theoretical, often all is not played with a few centimeters. To find the best size, please refer to the advice of the pro in a retail store (list available on our website).
